

David Kostuchenko

A full-stack developer specializing in front-end and user experience, complete self-learner, passionate and hard-working individual, looking to bring value and continue growing and becoming a better person and developer.

EXPERIENCE

Edi Hovalot, Rehovot, IL — *Freelance* (edihovalot.co.il)

Moving company that specialises in sensitive equipment.

AUGUST 2021 - AUGUST 2021 (Frontend Developer Freelance)

- Developed simple wireframes and design ideas using Figma, and refined them into a final version of the website design.
- Divided the design into components with a modular approach in mind for easier execution of new features and changes.
- Implemented the design using Gatsby.js framework to give the website a competitive edge and managed to get higher SEO scores than many other competitors.
- Introduced animations to parts of the website using Framer Motion giving the website a feeling of movement and a modern look.

Liza Willow, Gomel, BY — *Freelance* (lizawillow.com)

A young and aspiring digital illustrator based in Belarus.

APRIL 2021 - APRIL 2021 (Frontend Developer Freelance)

- Designed the website using Adobe XD, in a minimalistic style which highlights the colors and style of the illustrations putting them in the center of attention.
- Created a theme with global variables that allows easier access to shared font styles, and color palettes and makes future rebrandings much simpler and faster if necessary.
- There was a need for a lot of imports that create a lot of code so I came up with a solution with the use of GraphQL and the source-filesystem plugin that enabled me to import the contents of an entire folder with one single GraphQL query, keeping everything nice and organized.

EDUCATION

Shevah Mofet, Tel-Aviv — High School

SEPTEMBER 2011 - JUNE 2017

Completed the biotechnology major, received a technological certification with a specialization in biotechnology systems.

Yehoshua Rabinovich St 2
